stay on his parents' health insurance plan until he got a job at 27, with insurance.

Chandra in Summit County writes that she recently commented to some friends about the surprising benefits she was receiving under the Affordable Care Act, and one of her friends suggested she share her story with her elected officials. She says: Because of the ACA, we were able to switch to my husband's insurance without worrying that I would not be covered due to my pregnancy being a preexisting medical condition. The ACA had a very real financial impact on my family.

The question is, Why do some Members of this Congress, all of whom, I believe—almost all of whom—are receiving government-sponsored health insurance benefits from a good government insurance plan—why do they want to deny it to people such as Chandra and people such as Rachel and others

Chandra says: I am not the type of individual who one would first think of when thinking of beneficiaries of the ACA. I have a master's degree, my husband and I both work full-time, and our employers also offer a full range of medical, prenatal, and optical benefits.

A few years ago, my husband and I decided to begin growing our family. Thanks to the Affordable Care Act, there were no copays for my prenatal care, suggested immunizations or potential well visits. When our son was born, I immediately saw the true impact of the Affordable Care Act. Babies have many well visits and the cost of copays and immunizations have been a burden to some of my friends. Thanks to the ACA, we didn't have that financial burden. Thanks to a combination of good insurance and the Affordable Care Act, I was the recipient of a very nice, double electric breast pump. I also became the first employee at my job to utilize the provisions of the ACA for nursing mothers. A few years later, 2 months before our second child was due, I had the opportunity to take a better job.

She goes on.

The question again is, Why do they want-why do a bunch of politicians who have good insurance, paid for by taxpayers—why do they want to take these benefits away from the 25-yearold man who now has insurance on his parents' plan before he finishes school and goes out in the workplace? Why do they want to take away the preventive care families now have so when their daughter has an earache they can actually go to a family doctor because of the insurance rather than go to the emergency room? All of those things just beg the question, Why the politics of repealing ObamaCare and repealing the Affordable Care Act and taking these benefits away from so many Americans?

Five hundred thousand Ohioans have insurance, 100,000 more young people, a million Ohio seniors getting benefits with no copays and no deductibles, preventive care that helps them live longer, healthier lives. That is really the question.

I yield the floor.

The PRESIDING OFFICER. The Senator from Hawaii.

## U.S.-CHINA CLIMATE AGREEMENT

Mr. SCHATZ. Mr. President, I rise to commend the historic agreement reached yesterday between the United States and China, the world's largest emitters of carbon pollution. This agreement is the latest and perhaps most consequential in a string of actions President Obama has taken to fight climate change.

Today, we have hope. We have hope because this agreement puts the world on a path towards solving climate change—hope because the world's two largest emitters have found common cause in protecting public health and economic opportunity for their citizens and for the world and hope because we are once again reminded what American leadership and political will can accomplish.

President Obama and President Xi of China recognize that climate change threatens our families, our jobs, our health, and our way of life. They deserve our thanks, as does Secretary Kerry, for their tireless work and dedication to this cause.

We can solve this. We know what we need to do, and we know how to do it. Today we see what political will can accomplish. I am now more hopeful than ever that we can keep warming below 2 degrees Celsius by the end of the century. This is the level scientists say is necessary to stay below in order to avoid catastrophic global consequences.

Together our two countries account for about 40 percent of the world's greenhouse gas emissions. We have a responsibility to act early and to act together, and this agreement puts us on that path.

The agreement recognizes that the United States and China must take short- and long-term measures to reduce emissions and encourage the development of clean energy. This represents a major shift for China, which had struggled to balance economic growth with growing pollution and has now agreed to cap carbon pollution for the first time ever. It is difficult to overstate what an important achievement this is, especially a full year before the next round of international negotiations in Paris.

As Secretary Kerry said today, this is a major signal to other countries that they should also put forth ambitious emissions reduction goals well before international negotiations start in 2015

In addition, China has agreed to get a full 20 percent of its energy from zero emission sources by 2030. This means China will have to deploy close to 1,000 gigawatts of new zero emission powerplants. This is the amount of elec-

tricity the entire United States currently generates and shows just how serious China is about addressing this problem.

American leadership was crucial in forging these goals. It wouldn't have been possible without the President's Clean Power Plan, which will reduce emissions from the power sector by 30 percent relative to 2005 levels by the year 2030.

This agreement goes beyond even those ambitious targets, and in the coming months and years, it will be important for this President and the next to maintain and strengthen the Environmental Protection Agency's ability to protect Americans from harmful pollution.

Despite near universal consensus among climate scientists that the Clean Power Plan is part of the solution to fighting climate change, today that plan is under attack in Congress. Right after the President announced this historic agreement, climate deniers in Congress started rolling out every tired argument in the book. In fact, one of our colleagues here has already dubbed this plan "unrealistic" and called it an "ideological war."

These claims are the last bastion of a hopeless cause that ignores what we see all around us—from farmers to fishermen to small-town mayors. Theirs is an untenable position, because poll after poll shows that Americans do care about this issue. They care about it deeply. Americans care because they know fighting climate change is really about protecting their children's health, protecting economic opportunity, and leaving our children a world better than our own.

We are seeing the deniers' arguments collapse around them. One of their favorite tropes was to claim that U.S. actions are meaningless without action from China. Well, it looks as though that argument took a fairly big hit yesterday.

In fact, the U.S. did act first by developing the Clean Power Plan. The rules haven't even been finalized, but they are already giving us the leverage to reach major international agreements.

As excuse after excuse fails, we will see climate deniers retreat to tired claims that anything we do to reduce pollution will hurt the economy. But remember that we have heard these claims before. They were wrong then, and they are wrong now.

The list is long, so I will mention just a few. Taking the lead out of gasoline, putting catalytic converters in cars, reducing acid rain, all were met with panicky claims of economic devastation. But what we have learned is that keeping our air and our water clean actually helps our economy.

This agreement between the United States and China is historic. It is a real breakthrough, and it gives us hope that we will be able to confront and resolve one of the greatest challenges of our time. But it is still just an agreement.

We need to follow through with action. We must listen to the American people and amplify their voices as they call for action to preserve our health, our economy, and our way of life.

Mr. President, I yield the floor.
The PRESIDING OFFICER (Mr. BROWN). The Senator from Louisiana.

## KEYSTONE XL PIPELINE

Ms. LANDRIEU. Mr. President, I was on the floor earlier today. I have been on the floor since we convened back into session—our first session since the election—and I am very heartened by what I have heard from colleagues such as the Senator from Hawaii, who just spoke, our colleague from Montana, who just spoke, our colleague from Tennessee, who spoke; as well as the leadership particularly, including Leader REID, majority leader-to-be MITCH MCCONNELL, and the Senator from Texas, Mr. CORNYN, all of whom came to the floor and said they heard the message of the American people. The message is that now is the time to stop the bickering, stop the fighting, stop the gridlock, and take action on issues the American people know are the right answers for our country, focusing on building jobs and economic hope for the middle class, in large measure because of this extraordinary opportunity for an energy renaissance that is underway as we speak—energy jobs, petrochemical jobs, manufacturing jobs.

Our unemployment rate in south Louisiana is 3.5 percent. Our general unemployment rate is much lower than the national average and has been for many years. But even in my State, with these very positive numbers, middle-class families are seeing their incomes stagnate, their way of life not progressing, and their economic progress not moving forward as it should.

So while people are happy and doing well in some parts of the country—every leader came to the floor and said, we heard the American people. We want jobs. We want economic opportunity. We want the middle class put first. We want gridlock put last, and we want you all to roll up your sleeves and get the job done. That was the message.

So I came to the floor at 2 o'clock, the first minute we opened, to claim the floor to say let's begin with trusting each other, moving forward, and passing the Keystone Pipeline which is a bill that has enjoyed bipartisan support and has the 60 votes on this floor for passage.

There is strong objection from the 40 Members who have been opposed. Of course they have a right to be opposed. We debated this for 5 years, but the process is let's vote and let the process move forward. I am very encouraged that in the 2 hours 15 minutes I have been on the floor that the House of Representatives has actually heard this call and has decided to introduce—

the Rules Committee will be meeting tonight. I understand they want to introduce the identical bill to the Hoeven-Landrieu bill which will give a clear path. It is a stand-alone Keystone only with private property rights language that is very important to the Republican base but it is also very important to Democratic Members, for me. personally, and my State, but for many rural States on the Democratic side. We cannot allow international companies to expropriate our properties here without due process. It cannot happen. I am the strongest advocate of building pipelines everywhere, but there are private property rights that have to be followed.

The language carefully drafted by Senator Hoeven and myself respects the private property rights of American citizens. I understand the House is going to take that language and the straight-up, no attachments, no riders, no anything—except for the Keystone language as it is written in this file that is pending and pass that out of the House.

We have already made some progress in getting the Keystone project built or moving forward. I want to put into the record a couple of headlines of magazines and articles that I think help to underline or underscore what I am trying to say.

The "Science" magazine editor-inchief says, "Time to move forward on Keystone Pipeline."

LABI: "Twenty Louisiana Chambers of Commerce support Keystone Pipeline." This is the Louisiana Association of Business Industry. It is a recent headline.

The Washington Post: "On the Keystone XL pipeline, put policy ahead of politics." That is what we are doing today.

Illinois Review—this is one of the most important. "AFL-CIO says Keystone XL is not just a pipeline but a life line."

The largest labor unions in our country have rolled up their sleeves. They are in this fight. They are telling us, Democrats and Republicans, but mostly to the Democratic Caucus, because they are part of our base, vote for the pipeline. This is jobs for average middle-class working people that we need. We deserve them, they say, in States such as yours, Mr. President, Ohio, Illinois, Pennsylvania, and in States such as Colorado, New Mexico, New York. I could go on and on. In West Virginia.

Remember, my State—not that we don't need good jobs but our unemployment rate is very low. We have jobs and opportunities pouring into Louisiana and Texas, the energy coast of America. We are proud of it.

We are proud not only to produce these jobs and this energy but we are helping to fuel a renaissance of manufacturing in the Midwest. We are exceedingly proud of this. We are not just creating jobs for ourselves, we are creating jobs for the Midwest, for the manufacturing renaissance of America.

We are allowing for the expansion of the economy on the east coast and providing help for the west coast. It is what we do. It is what America's energy coast does. No coast does it better than we do.

We are connecting to a partner, Canada, which is better for us in many ways than Venezuela or even some of our friends in the Mideast, and we don't—not every friend is our friend in the Mideast. We are getting oil from our best friend, our best trading partner, our best ally, that has equal economic standards as we do and even some higher environmental standards than we do to create economic opportunity for our country.

I wanted to submit this for the record. There are no other Senators to speak. I am going to yield the floor in a minute.

We are still in a time of morning business until votes at 5:30.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. NELSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, I ask unanimous consent that I be able to show a device in the course of my presentation about exploding airbags.

The PRESIDING OFFICER. Without objection, it is so ordered.

## AIRBAGS

Mr. NELSON. Mr. President, there has been quite a bit in the press about defective exploding airbags. This is a part of a steering wheel with the airbag deployed. In the steering wheel, the driver would be like this with their hands on the steering wheel. When the impact occurs and the airbag is deployed, instantly, if you have seen that kind of impact on the airbag, because of the chemicals inside of the steering wheel, it causes an explosion that comes out of already existing holes in the metal that contains the airbag and it deploys the airbag like this so that the—in this case, the driver—in the case of the passenger, the same, but it is not a steering wheel like this. That protects and has saved countless, thousands and thousands of lives. The fact is that we now know there are four people in this country who are dead. There are a hundred who are injured. That is not including the international office, because of the defective airbag that has been manufactured by a Japanese manufacturer. What its defect is is that instead of the chemicals exploding to inflate the airbag, it explodes with such force for all of this that is contained within the steering wheel before it explodes. There is metal.

When the chemical explosion occurs, it is supposed to go through the airholes and fill the bag. Instead, what
